3 Introduction

Microchip's USB Power Delivery Software Framework (PSF) is a configurable USB PD solution that is compliant to USB-PD 3.0 specification.

PSF Source Pro application includes PD Source functionality with the support for Power Balancing, Power Throttling, PPS, Boot time configuration parameters and I2C based DC-DC controller for port power control. This document is intended to guide a user on setting up the PSF-EVB to work properly with Source Pro version of PSF along with a demonstration of a PD device attached to the PSF-EVB.

4 Prerequisites

Hardware:

1) Microchip PSF Evaluation Board (PSF-EVB)

Figure 4.1 Microchip PSF Evaluation Board

2) 2 Microchip UNG 8198 PM-PD Cards – 1 per port

Figure 4.2 Microchip UNG 8198 PM-PD Card

5 Setting up the PSF-EVB board for "PSF_EVB_Source_Pro"

1. Connect PM-PD cards to J34 and J43 of the PSF-EVB in correct orientation as shown in Figure 5.1

I2C Slave address for Port 1's MPQ PM-PD should be selected as 0x61 by connecting the jumper in 0x61 of J2 and slave address for Port 2's MPQ PM-PD should be selected as 0x62 by connecting the jumper in 0x62 of J2. J2 can be found on top left corner of the MPQ PM-PDs.

Figure 5.1 PM-PD Orientation

2. Ensure the following jumpers are connected in PSF-EVB before proceeding to next step. An image of PSF-EVB with all the required jumper connections highlighted is shown in Figure 5.2

Jumper	Pins
J38	1-2, 3-4
J39	1-2, 3-4
J20	1-2
J21	1-3, 2-4
J15	1-3, 2-4
J1	1-2
	3-4
	3-4 5-6 7-8
	7-8

Table 5.1 PSF-EVB Jumper Connections

Figure 5.2 PSF-EVB with jumper connections highlighted

- 3. Connect 150W power adapter to J49 of the PSF-EVB
- 4. Connect one end of Atmel ICE to PC using USB Micro-B cable and the other end to J19 of PSF-EVB. A dot(encircled in image) will be present in Atmel ICE Adapter board which gives an indication that this pin should be connected to 3v3 of J19. The right way to connect is,

6 Running the demo

Refer <u>Getting Started with PSF</u> document for the detailed steps on setting up the build environment, building the Source Pro PSF project and programming the hex file in the PSF-EVB.

Refer Appendix 8.2 of <u>Getting Started with PSF</u> to change any SAMD20 Harmony configuration. Refer 10.2.9 Boot time Configuration of <u>PSF User Guide</u> to change any configuration parameters.

- 1. Ensure all the jumpers are in place and Power on the PSF-EVB.
- 2. Program the hex file by following the steps mentioned in section 8 of Getting Started with PSF
- 3. Connect a PD device to Port 1 of PSF-EVB using a USB-C to USB-C cable.
- 4. Connect another PD device to Port 2 of PSF-EVB using a USB-C to USB-C cable.
- 5. The image demonstrates a scenario where a Google Pixel 2 phone has been connected to Port 1 and Samsung Galaxy S8 phone has been connected to Port 2

Figure 6.1 Two PD Devices connected to each PD port

7 Expected Results

1. Once the hex file is programmed, the SPI_IRQ_N LEDs in both the ports flash and then turn off. DC_DC_EN and VBUS_EN LEDs will turn on.

Figure 7.1 Status of DC_DC_EN LEDs after power on

- 2. Once a PD Device is attached to a PD port, Source capabilities will be advertised by the PSF, followed by a PDO request from the device.
- 3. PSF checks if the PDO requested by the device is within the range of its capabilities. If so, it accepts the request and starts driving the requested voltage in the VBUS.
- 4. Once an explicit power contract negotiation is in place, the device starts charging. PDO status LEDs will turn ON indicating the negotiated voltage as shown in Figure 7.2

PDO	Status LED
5V	Port 1 – D20, Port 2 – D19
9V	Port 1 – D25, Port 2 – D23
15V	Port 1 – D30, Port 2 – D29
20V	Port 1 – D33, Port 2 – D32

Table 7.1 PDO Status LEDs

Example with Port 1: If 5V is negotiated by the device, LED in the D20 of Port 1 PDO will glow. If 9V is negotiated, then LEDs in D20 and D25 will glow. In case of 15V, LEDs in D20, D25 and D30 will glow. If 20V is negotiated, all the LEDs will glow.

5. In our case, Google Pixel connected in Port 1 has requested 9V and Samsung Galaxy in Port 2 has requested 5V. The status of PDO status LEDs is shown in Figure 7.2

Figure 7.2 PDO Status LEDs after device attach

6. One more scenario is shown where a HP Elite book laptop is connected to PD port 2. It has requested for 20V. After PD negotiation, the laptop starts charging. All the PDO status LEDs glow which indicates that 20V is negotiated.
